

Hot load Testing

3 x LNAs, no filters/attenuators

SNAP config is obs config for SNAP 122

Data under 'O' key in file

Configured pi w/ obs-config-load-only.yaml
(in calibration_scripts branch of eigsep-observing)

2 thermistors in back 2 LNAs (second 2 that the signal sees, closest to SNAP)

Set temp to 95°C first
4.96V to LNAs

@ 1:27 PM turned V from 4.96V $\rightarrow$ 5.26V
 $\rightarrow$ 5.09V

@ 1:46 PM turned V back down to 4.96V

@ some time, changed target temp to 40C
